

Data Intelligence Suite

Version 10.1
Release Notes

New Features in version 10.1

- New Revamped Data Lineage Analyzer
- Intelligent Classification of Data Assets
- New *AIMatch* capability - Auto Match Business Terms to Technical Metadata using NLP algorithms
- Improved Mind Map for business lineage
- DM Connect for Data Catalog (Automated Integration of DM with DI)
- Sensitive Data Dashboard with Drill Down Capabilities
- Facilitating user onboarding via in-built tutorials and walkthroughs
- Addition of Schema level node for databases in Metadata Manager
- Support for Rich Text Fields in Extended Properties to document long text
- Ability to move Business Terms from one Catalog to another

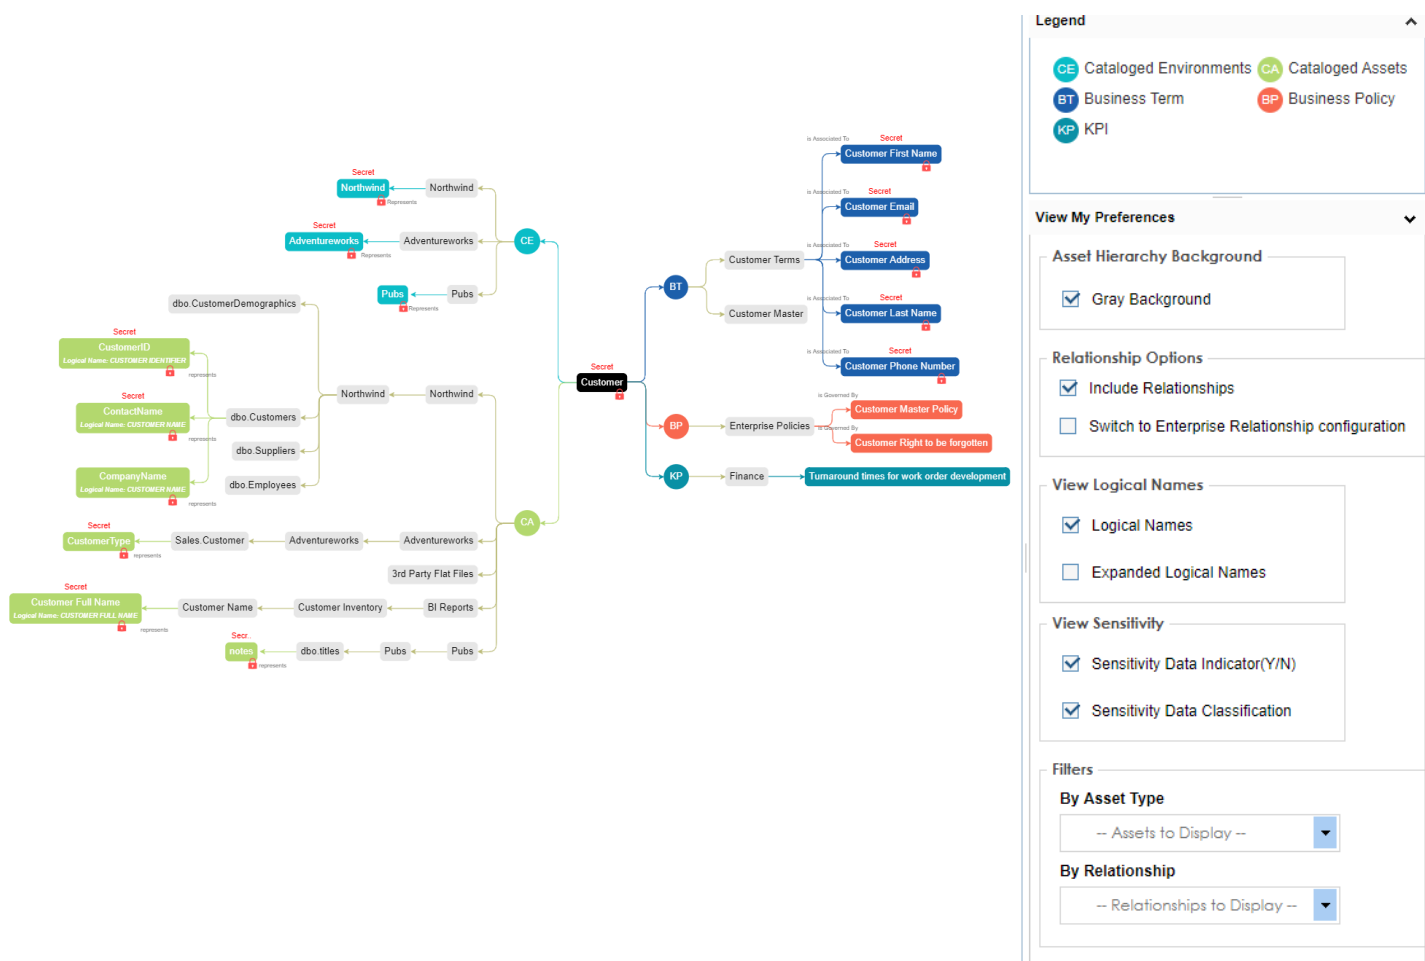

New Revamped Data Lineage Analyzer

- The new lineage provides a grouped view of Tables and Columns making the UI cleaner and easier to navigate for the end user
- The new lineage provides both high level business view and deep dive technical view.
- View multiple table and column lineages in a single UI without the need to rerun the analyzer
- Hover Traceability feature for easy analysis of the lineage
- Click and Blur out non-connected paths for easier analysis incase of large data sets

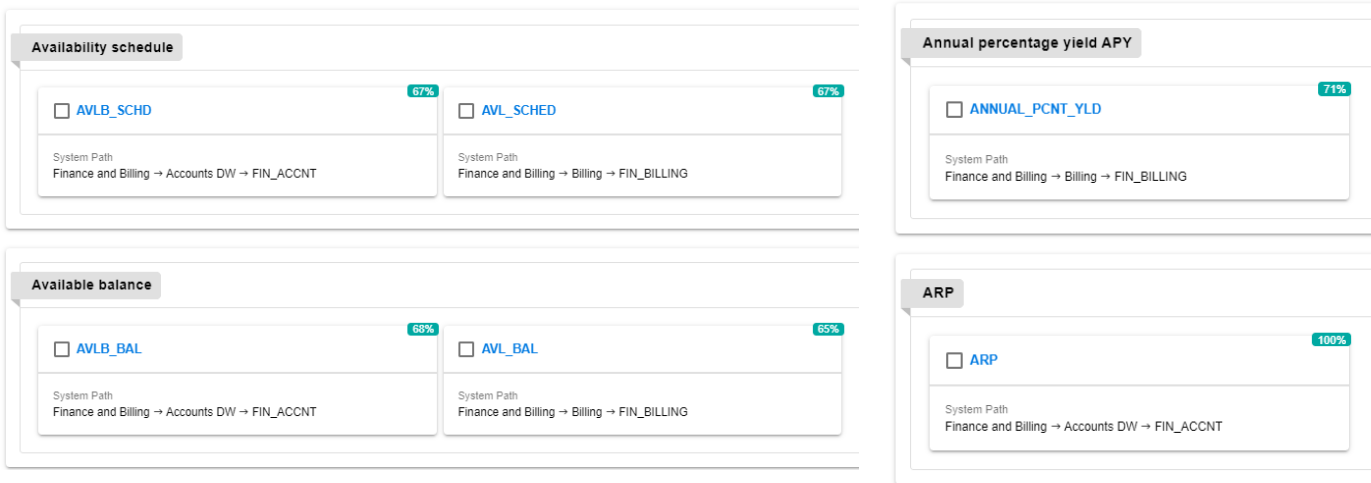

Improved Mind Map with personalized User Experience

- Personalized user experience for faster business analysis
- Easy to use UI with user preferences being stored
- Flexibility to view sensitivity Classification and Logical Names

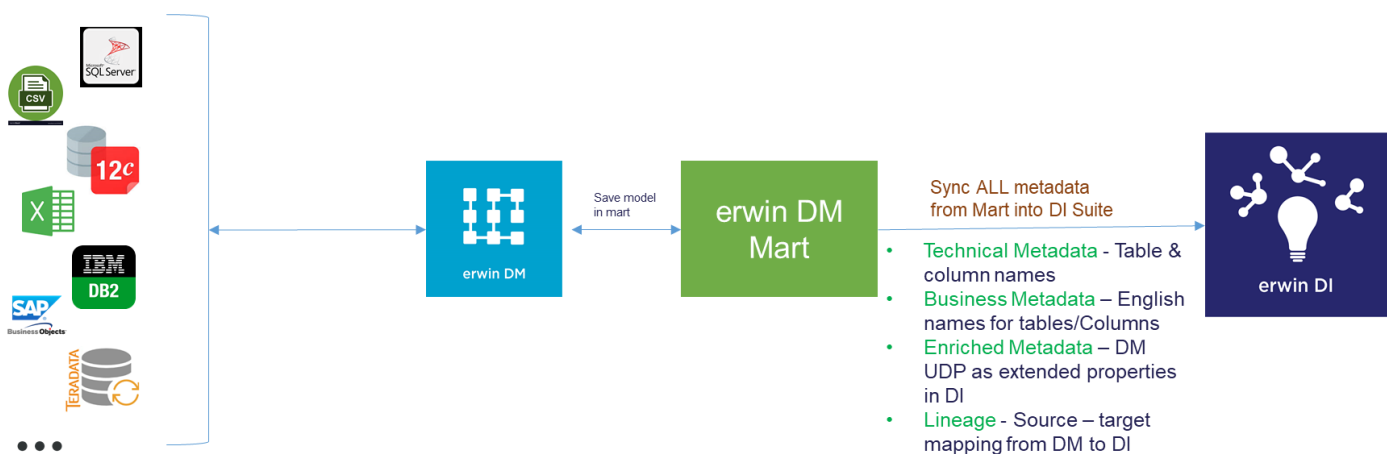

AIMatch - Auto Match Business Terms to Technical Assets

- Define a Business Glossary and link to the IT systems for the **AIMatch** engine to automatically find and suggest technical asset matches for the business terms
- View the top 5 matches along with % of match
- Increased productivity and considerable time savings for end user

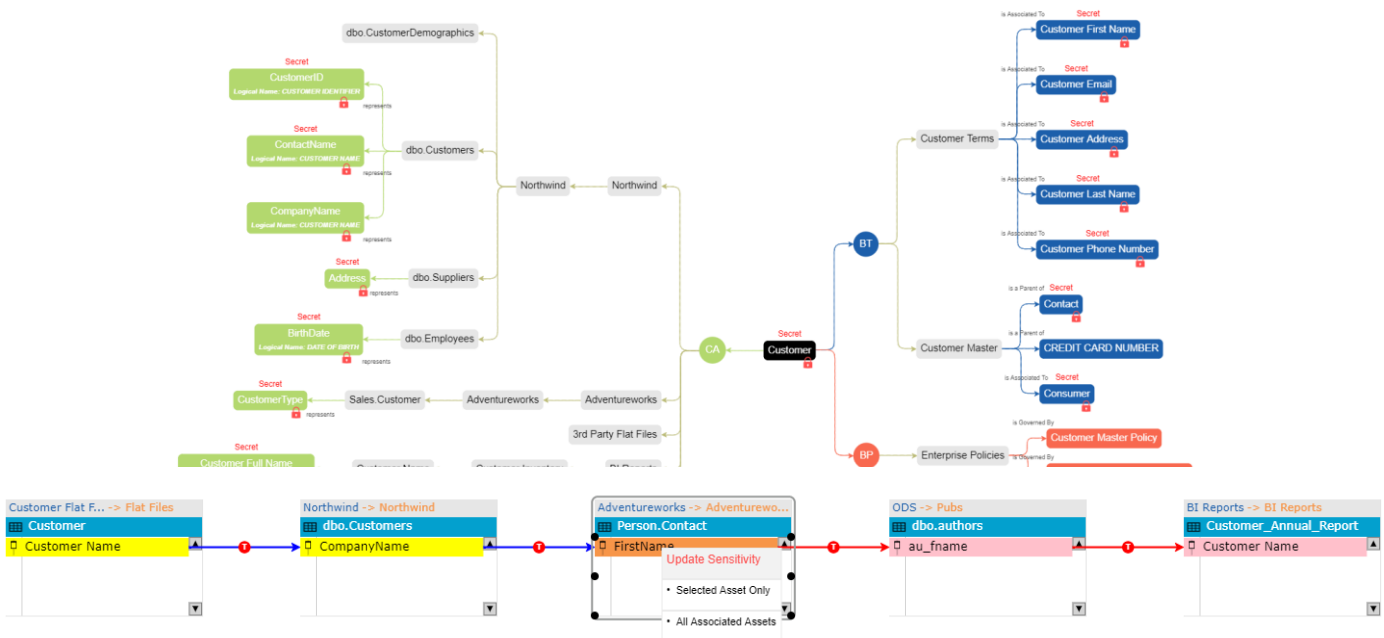

DM Connect for DI – DM integration with DI

- Easily sync all DM assets with DI (Physical & Logical Models including UDPs, Mappings and NSM files)
- Avoid duplication of metadata from various tools
- Harvest models on a periodic schedule with no manual user intervention

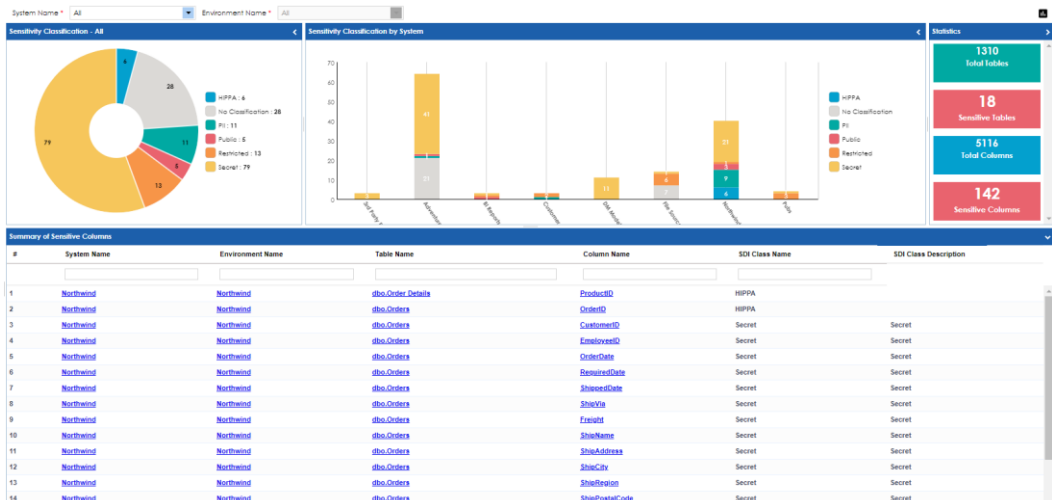

Intelligent Classification of Assets towards Compliance

- Classify IT assets at the Environment/Schema level
- Trace an asset via the Data Lineage path and classify all related IT assets
- Trace an asset via the business mind map and classify all related IT and Business Assets

Enhanced Sensitive Data Dashboard with drill down capabilities

- Clickable Graphs to drill down and view classified attributes by Classification Type (PII, Restricted etc.) or by a System/Environment and analyze information
- Enterprise wide view of classified assets towards ensuring required compliance

Integrated Tutorials and Walkthroughs for facilitating user onboarding

- Quick start tutorials that provide the end user with UI walkthroughs to understand features and functionalities helping them come up to speed faster on the product features
